

NEXTFLOWS ACADEMY · DEMO DAY

Notes & FAQ Search

An offline MCP server for searching and managing your Markdown notes

Mohammad Shamasneh · Nadeen Jaber

The Problem

- Course notes, FAQs, and setup docs pile up as scattered Markdown files.
- An AI assistant can't answer questions about them unless it can search and read them directly.
- We built an MCP server that gives any compatible AI client structured, offline access to a local notes folder.

Scattered across folders — unreachable by AI, until now.

How It Works

Node.js + TypeScript, built on the official MCP SDK

Path-traversal hardened

Zero network calls

Zod-validated input

7 Tools

Everything the server exposes to an AI client

search_notes

Find notes by keyword

list_notes

See every available note

read_note

Read a note's full content

add_note

Create a brand-new note

update_note

Replace a note's content

append_note

Add to an existing note

delete_note

Remove a note

What's Next

HTTP Transport

Deploy beyond a single machine

Guided Contributions

review-checklist.md-driven workflow for new notes

Prompts & Resources

A richer layer on top of the existing tools

Thank you — questions welcome
